

SkyLite

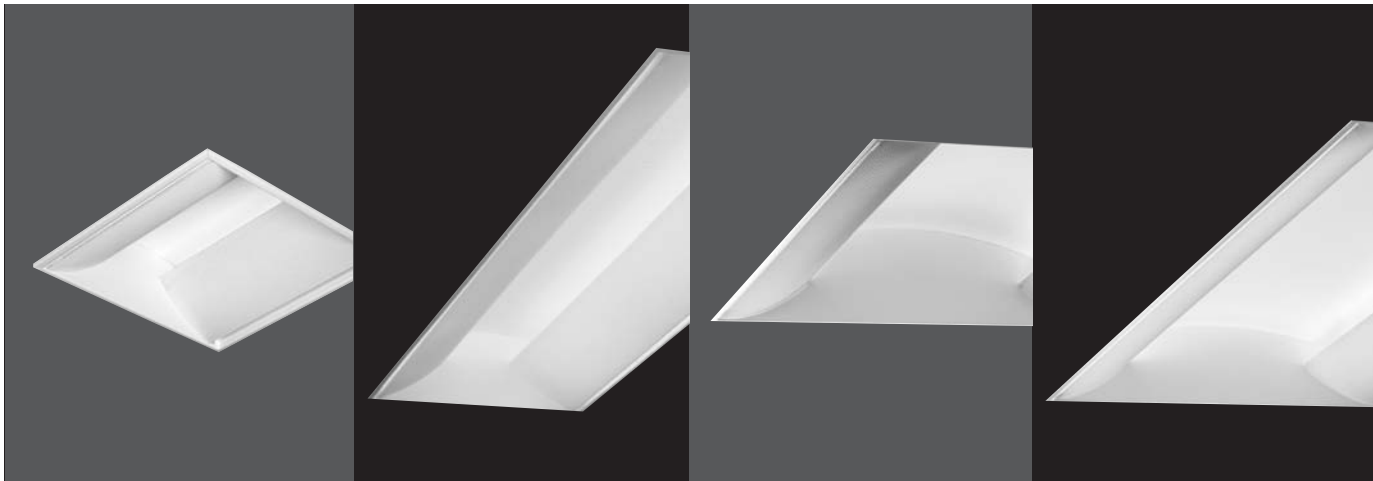

FOCAL POINT

Most lighting professionals agree, well-designed recessed indirect systems are superior to parabolics and offer a smart alternative to suspended indirect lighting. Consider Skylite™ by Focal Point®. Its high angle of distribution lights up vertical surfaces, emphasizing interior architecture in a way parabolics can't. Soft, diffuse levels of illumination minimize glare and soften shadows in critical work areas. What's more, Skylite is less costly than most suspended indirect lighting, and can be used where low ceiling heights prohibit suspended designs. Graceful lines. Exceptional engineering. Premium manufacturing quality. This is what you expect from the leader in recessed indirect lighting.

This is skylite.

Skylite gives you the versatility to suit any interior environment, with a wide choice of luminaires that install easily in drywall or grid ceilings. All 2'x2' and all T5 Skylite fixtures may be continuously row mounted; 1'x4' and 2'x4' T8 fixtures may be continuously row-mounted in pairs. Skylite's matte satin white paint finish eliminates hot spots and lamp image often seen in other recessed indirect systems. Perforated lamp shields swing down for easy relamping, then snap back into place. They are mechanically secured to the fixture housing to remain in place during seismic events. Dimming and emergency options are available.

1' X 1' SKYLITE (FBX-11)

2-lamp 18W Biax

1' x 4' SKYLITE (FBX-14)

2-lamp T8 (32W)
 2-lamp T5 (28W)
